Advanced Temperature Monitoring for Dairy Excellence

M.I.M.o.S.A.
MILK INTELLIGENT MONITORING OF SENSORIAL ANALYSIS

VesCo Solutions introduces **M.I.M.o.S.A** dairy track - a comprehensive SaaS platform specifically designed for dairy producers who demand precision in quality assurance. Our solution combines cutting-edge software with optional integrated hardware to revolutionize temperature monitoring in dairy production.

Innovative Dual Probe Technology

Our system uses a proprietary dual probe methodology where Probe A measures the milk sample and Probe B measures a bottled water reference. This differential calculation ensures unprecedented calibration accuracy, setting a new standard for quality control.

Real-Time Monitoring & Alerts

Access comprehensive dashboards that display temperature data, alerts, and historical trends. Receive immediate notifications when temperatures exceed thresholds, allowing for swift corrective action to protect product quality.

Reliable Hardware Solution

Temperature monitoring devices with 4G LTE and RF communication ensure reliable data transmission even in challenging environments. Deploy across multiple locations with confidence.

Flexible Business Models

- **SaaS Only**
  Per-unit monthly subscription with customization options
- **SaaS + Hardware (Separate)**
  Software subscription plus hardware purchase or rental
- **All-Inclusive Subscription**
  Complete solution with full support

All plans include comprehensive training, documentation, and ongoing technical support

Key Benefits

Enhanced Quality Assurance
Maintain consistent product quality through precise temperature monitoring and early detection of deviations

Simplified Compliance
Automated documentation and reporting streamlines regulatory compliance processes

Operational Efficiency
Reduce manual checks, minimize errors, and optimize resource allocation across facilities

Contact us today to schedule a demonstration and take the first step toward advanced dairy quality control.
